PROFESSIONAL SUMMARY

DevOps professional with practical experience in monitoring production systems, managing incident tickets, and troubleshooting Linux and Windows environments. Proficient in log analysis, root cause identification, and ensuring service reliability across cloud platforms such as Amazon Web Services and Microsoft Azure. Focused on building automation-driven, reliable system operations as a DevOps Engineer.

EDUCATION

Bachelor of Technology in Computer Science Engineering	2021 - 2025
Musaliar College of Engineering and Polytechnic, Chirayinkeezhu	Trivandrum

EXPERIENCE

Associate System Engineer (Intern)	June 2025 – December 2025
Bridge Global Software Solutions	Ernakulam

- Performed Linux/Windows administration, managed on-prem machines, and software/hardware troubleshooting.
- Supported developers with environment setup, deployments, Git workflows, and small debugging tasks.
- Documented procedures, troubleshooting steps, and automation workflows for future use.

DevOps Intern	January 2026 – Present
Saints & Masters Private Limited	Ernakulam

- Monitored systems, analyzed alerts, and handled incident tickets by identifying root causes and mitigations.
- Troubleshooted service outages and performance issues in cloud-based environments on AWS and Azure.
- Assisted in security and compliance activities, system validation, and support for hardening and audit processes.
- Supported observability and monitoring improvements by working with logging, metrics, pipelines.

PROJECTS

VYN OS: Custom Linux Distribution

Created a streamlined Linux distribution optimized for low-end hardware by removing unnecessary services and adjusting system defaults. Strengthened understanding of Linux internals, system services, and performance tuning.

CERTIFICATIONS

- Introduction to Linux (LFS101)** – The Linux Foundation
- Docker Essentials** – IBM

TECHNICAL SKILLS

Core: Linux, Bash scripting, Python, Git

Containers: Docker, Docker Compose

CI/CD: Github Actions, GitLab CI/CD (build, scan, deploy), Jenkins, ArgoCD

Cloud: AWS(EC2, Cloudwatch, S3, Lambda, Load Balancer, WAF, RDS, IAM, VPC), Azure (VM, Azure Devops)

Monitoring: Grafana, Prometheus, Loki, Grafana Alloy, Alert Manager

Databases: MySQL, SQLite, PostgreSQL
